We are a authorized distributor of Firstcom FC-1G AC System. page 2 of 2. Firstcom FC-1G:. software firstcom fc 136Q: MongoDB adding a static index for a range in multiple collections I have a MongoDB collection (lets call it collection1) that holds items like: { a: 1, b: 2, c: 3 } A second MongoDB collection (lets call it collection2) contains related item data, so it contains data like: { a: 1, b: 2, c: 3 } I need to index this for queries that require the following range of item IDs: e.g. look for documents with a range of item IDs, e.g. find {a:{\$gte:1}, b:{\$lte:2}} I have tried using index on the first collection for these queries, but this doesn't seem to work (ie. if I set it up to look for the first item a and second item b the query doesn't return any results. Is there some way to get it to work? Or do I need to do this separately for each collection? A: If I understood correctly, you want an index on the field containing the ID range? If so, then try something like this `db.collection1.ensureIndex({a: 1, b: 1}, { unique: true, multi: true})` See the documentation for more details Update I am afraid I can't give you a more precise
