Osteocytes play an important role in bone remodeling. However, the effects of aging on osteocytes are largely unknown. The purpose of this study is to examine the expression of protein glycosylation in osteocytes and the relationship between changes in glycosylation and age, thus filling a gap in knowledge regarding bone homeostasis. Bone samples were obtained from the proximal tibia of 38 patients and examined by immunohistochemistry to assess the expression of two protein glycosylation-related proteins, calreticulin and WGA.
