Everything Activation Code Description: Everything is a simple and effective file search engine that includes many advanced options and configuration properties. It is capable of automatically indexing any drives and folders that you specify. It's an excellent general purpose file searcher and organizer. Search Results: Everything delivers search results instantly, thanks to the fact that it automatically indexes drives, monitors them for changes, and updates its index accordingly. The search results can be sorted by a variety of criteria, such as name, size, path, extension or date of creation. You can create a favorites list, save the search result to file, and resume the search. Combine Filters: You can combine several filters into complex Boolean expressions that are evaluated in ascending or descending order. Filter terms must be separated by OR (|) or AND (&). Terms inside parentheses must be separated by commas. The pipe (|) character can only be used inside Boolean parentheses. Customize Setup: During setup you can specify which data and settings location to use for the application, run it as a service and set its service port. You can also skip the indexing of NTFS drives. You can run Everything with administrative rights or disable indexing and start it on demand, or set up an autostart behavior. Launcher: The main application window is easy to navigate and shows all the options, columns and buttons. It includes a toolbar with different actions. Right-click on the search window's toolbar or the file list window's toolbar brings up a submenu with different options, like opening the Favorites panel. Favorites: You can add, remove, modify, merge and delete Favorites. New Favorites automatically appear at the top of the Favorites panel. Favorites can be saved to files. Configuration: After installation you can access several advanced options, many of them through advanced settings. You can set the size of the index, specify if Everything is installed in Program Files or Program and Temporary Files folders, set the date format, language, search keywords, theme, shortcuts, the index type and even the window style and transparency. EXIF Search: The application also enables you to search for camera, photo and MP3 tags inside images and audio files. The image size can also be searched for. Integration: You can associate Everything with EFU files (Everything File Lists), so it can automatically index fixed NTFS volumes.
