I would like to create a platform to support multiple images. What parameters are necessary to be set in TouchBuilder? Thank you. A: Make sure that you have defined an Archiver "xArchiver" on the platform; e.g. a Launchpad/LaunchpadAperture. If it is not defined, one will be created automatically. Under "xArchiver" you can define the type of file you want to create (e.g. a png image), the "xArchiverFlags" to define the attributes of the file (e.g. max-zoom, etc.), the name of the output file (e.g. file.png), the folder (e.g. /var/folders/s/wjym79t9h/T/file.png), the place where the files are created (e.g. /var/folders/s/wjym79t9h/T/file.png) and the resolution of the images that are generated. If you are using the Python API you have the equivalent "createPlatform" method. See the documentation for more details.
