I expected the purchases to be very cheap, but even after getting over the initial purchase lag it didn't budge. For the first two days there were no giveaways, no fixes for bugs, so I was extremely hesitant to purchase, but it was free the entire time. Yet again, there were no problems with the system as I was able to unlock every character pretty much immediately. It was awesome! i'd have to say everything was on time or ahead of it, there were no delays in transactions for 60 days on release date, no server issues, and i'd say i experienced around a week of stable performance and actually had undocking to my gamehub within 2-3 mins upon starting play for some random matchs, between the 1st AND 2nd day i had like 20-40,000 isk on servers putting me almost

It seems to have no meaning. A: From the reference: The alt element provides a label for the associated image, in cases where the image is used in a region of the page that is styled with alternate background images. It is intended to be used when you have a set of images to use as background, some of which could be considered "alternate" to the default image, e.g.: If the alt text changed the browser would load the default image. With the above example, the browser would load the picture my_image.jpg, but not the other two pictures. Also note that alt text must be allowed to be empty, and cannot contain any markup. Additionally, if you wish to put an image in a fancybox overlay (Lightbox): Use the.overlay class as the alt tag in the markup as above, this will set the overlay text, while ensuring that the browser will load the intended image (which if it's in the same domain will automatically be in the same lightbox). The fancybox overlay class can also be appended to elements that will be displayed inside of fancybox. You can use.overlay with the original fancybox function like so: $(".fancybox").fancybox({ closeBtn
