Ensure that your size match folder and also the file extension of.the x64 file is installed for your version. Version 2.. Library.exe.. which makes any design you can dream up.Q: CodeIgniter URL scheme to open Activity page I am working on my first CodeIgniter project and the url scheme/page for the application is setup as follows: which actually opens the application/a/index.php page. My question is: Is there any way to make this point to the controller/function which is actually associated with that URL? e.g. In this scenario I would expect that a function from the application/a/controller/activity.php file would be called, this way I am able to open the requested page. Hope my question is clear. I am new to CodeIgniter and I guess the syntax is wrong. Thank you in advance. A: There are several options: Pass the argument from the URL, either directly (as part of a GET request) or indirectly (as part of a POST request). The latter seems to be the most desirable way, as it's the standard and cleanest way of doing it. Pass the argument as part of the method name in the method definition. (This is the "proper" way of doing it, but it's not exactly "clean".) Include the argument as part of the URI segments. If you're using CodeIgniter's Router class, it will take care of creating the correct segments for you. (This is, admittedly, a bit kludgy.) Generally, I'd suggest option 4. This allows you to pass any number of arguments, but makes sense for what you're trying to do c6a93da74d
