Ø\$Ù□Ø²Ø\$Ø± SolidWorks 2021 SP1.Ocular features in systemic lupus erythematosus. Lupus erythematosus (LE) is a common systemic autoimmune disease with a range of clinical features. The diagnosis can be difficult and the clinical features vary widely even between individuals with the same disease. To review the eye complications associated with LE. We performed a systematic review of ocular features in systemic LE. We searched MEDLINE, EMBASE, and PUBMED databases for English-language studies published from 1966 to 2009. We also manually searched the references of relevant published articles. Two investigators evaluated each report for eligibility and risk of bias independently. Quality of the articles was assessed using a quality assessment tool. Thirty-three articles were identified for inclusion. We did not find evidence for a link between LE and the ocular features indicated in the included articles. Although the majority of published articles describe LE predominantly in African-Americans, European patients and other ethnic groups are also reported. There are less data on childhood-onset cases. Clinicians should be aware of the disease spectrum in ocular complications. No evidence has been reported for LE being an etiologic factor in any of these ocular features.About This Quiz Recent polls show just about half of the US population wants to see tax increases on the rich. Would you like that? So would Andrew Cuomo, who has just signed into law a measure that raises taxes on non-single millionaires (those who make more than \$400,000 annually). But c6a93da74d
