hi, how did you transfer photos to your new computer from the external hard drive? i tried to follow your instructions on the adobe forums. this is what i did, using the drive manager i exported to two new folders named: fotos-elegides\fotos\year\month and fotos-elegides\fotos\year\month\photo. i put an img or jpg for each image file. it worked for some, some of the images were imported and some were not. i redid it and the photos were all imported. so i see the lightroom running, but no fotos to see. i think there is something missing. am i using the right folders? the last step is to link the new folders to the lightroom not the folder on the external hard drive.

so i link the external drive which has the old photo folder to the new computer. i do not link the folder on the external hard drive which has the old lightroom library. i did not link the folder on the external hard drive which has the new lightroom library. i think i am not doing it right, any help? or advice? thanks, stuart hi again victoria good, you are almost there. i havent used lightroom in a while, not sure how it works now. in lr i import the photos from the external drive and link them to lightroom. you are right, if you link the old laptop to the new laptop then you will end up with one lr. you will also be able to use the old "native" catalog to view on the new computer. i will send you my latest export again so you can see how i do it. stuart hi stuart, thank you very much for your work. anyway, can you send me how to do it because im not sure what folder i need to place photos in a new computer, what files i need on the external hard drive, and what hard drive. i have come across several website that are not very helpful to new users. if you are feeling generous, i was not able to find the lightroom 4 folder in my external hard drive so i will import my photos into my new computer. im no expert and my questions are basic. thank you very much once again. stuart

as long as you will not damage the ssd during re-formatting, you can reuse it. however, if you plan to return it to samsung, they might not accept it because they will know that it had been formatted twice. in such case, another ssd should be purchased and used. in this way, you can save almost 30% of the price of the ssds. to determine the performance of the drive, you can use either the internal smart utility or the external utility provided by the drive manufacturer. smart parameters relate to the physical aspects of the disk drive. there are two smart parameters that can be used to determine the health of a disk drive: this free ssd diagnostic tool has been designed to help diagnose issues and to help optimize the performance of samsung ssds on your windows pc. for more information about this tool and how to use it, visit the samsung ssd toolbox website . hi, when i use drop box to migrate from pc to mac i download all the files to the external harddrive where they will be synced to the drop box folder. from this folder the next time i sync it to lightroom it will pull up and overwrite any older images in the library. i am still under the impression that it does not recognise the external drive. i never use the external drive, i

always use my laptops main drive. thanking you
alana thank you for your reply. sorry if i missed your
last post. thats the issue that i was having with
lightroom. the mac and windows os directory names
will match up except the mac os will have the
dropbox letter (c for photo) instead of the drive
letter. i originally started with my old windows drive
c:, but thought that it might save me some time if i
move to drop box and migrate my catalog to the
external drive. since i used the same program, i
should be able to set up the directory links so that
as soon as i switch back to windows, it will still work
the same. another thing that may also help would
be if dropbox could sync itself with the external
drive since that would effectively mean that no
matter where i am in the world i would be able to
access the data on my external hard drive. however
i think that drop box has a one off fee and that may
be prohibitive of this. 5ec8ef588b
