You can now use a voice-activated camera to initiate and record video clips. Adobe made improvements to its video tools that make editing clip transitions and changes in angle and speed simple. The new Single Button Camera, which has been in Adobe Premiere Pro software since 2015, makes working with video much easier. Adobe has even produced an online video course on the basics of video editing. Adobe has launched three new features that aim to curb the spread of malware on software: Adobe Acrobat and Reader all now include a built-in protection system and Adobe Acrobat DC includes an integrated security scanner. Adobe also claims that its Document Cloud will now automatically scan Let's Encrypt certificates and will flag leaked encryption keys before they have a chance to be leaked. Adobe's newest Photoshop features do a lot to improve Day for Night. The new functionality works in real-time, with results that are easy to see and interpret. You can also apply the changes with the click of a button or even on-the-fly. This feature is especially useful for scenes where the lighting is already changing in real time. Adobe launched new features aimed at improving post-processing for videos. You can now make edits to the video after it's already been recorded. You can also use the Layers panel to clone an image and then edit the clone's opacity before adding it to your video. You can also convert videos into your desktop format of choice like MP4, AVI or MOV.

The Spot Healing Brush sets up a box over the area you are repairing. Then, using the brush, click on the area you want to repair. It can be as large as you want, and usually will work better than using a brush that is too small to catch the affected areas completely. Add a little more color to your image using the brush or overlay it with another color for a less noticeable change. Here's a quick

speed run-down of the most important tools in Photoshop vs Lightroom:

- Lightroom is a digital photo editor; Photoshop is for editing a higher-quality, larger-sized versions of that photo. They fit into two different shooting day-to-day scenarios - and exactly how you use them is predetermined by the sort of photos you usually take and how large or small those photos are.

But here's the main difference: Lightroom is a free, open source program; Photoshop is a proprietary program. If you want to use the very best tools, and to do the most editing and creative work, you'll need Photoshop, and most likely an appropriate subscription to Adobe. If you're not already a Creative Cloud subscriber (a \$20/month subscription), it's time to take the plunge. (There's also a third-party Photoshop Elements version, which some photographers find more they prefer and which might be worth a look.) A word of caution: one of the key differences between Photoshop and Lightroom is the number of pixels. Photoshop provides a much higher number of pixels, so you can start with a really big canvas. A reasonably large canvas will be around 2.5 GB. If you have a website, you can usually get away with a much smaller canvas. The download size varies depending on your needs, and the resolution of your exported file. 933d7f57e6
