HBBatchster is the fast batch encoding application designed and developed for Windows platforms using a very easy to use graphical user interface (GUI) interface, for all users who want to encode multiple files at once, including the new auto resume functionality with the ability to resume encoding as soon as the queue is empty after the

encoding is paused. A few key features include:

- Easy and user-friendly graphical interface
- Flexible video encoding options
- Auto Resume after pause
- Multiple preset categories
- Powerful batch encoding for both individual files and entire directories
- Multi-core & Multi-threading support
- Multiple encoders and video output types supported
- Direct encoding from the graphical user

interface ·

Compression settings  
override on file by file  
basis · Rich directory  
creation with custom  
filenames · HLS

support · HLS profiles  
support · Keep Only  
Files Progress bar ·

Pause/Resume · Preset  
categories · Displays  
general settings of the  
current batch ·

Displays specific  
settings for each  
individual preset ·

Displays current file  
encoding statistics ·

Resume after pause ·

Enable or Disable hls support · Full support for presets categories · Full support for presets · Full support for video output types · Encode individual files or directories · Encode filenames as desired · Encode files with crazy filenames with ease · Encode files with special characters · Raw URL support · Repeat list support · Drag & Drop · Progress bar for each file in the queue · End processing by File name · Batch

encoding from filelist  
mode (default) · Batch  
encoding from folder  
mode · Batch encoding  
from file paths

(manually entered file  
paths) · Support for  
working with multiple  
encoders/output types  
simultaneously ·

Support for different  
processors types (i.e.  
Core 2 Duo, Quad  
Core, 6 Core and 8  
core processors) ·

Ability to

queue/unqueue presets

· Ability to create

presets · Ability to save

presets · Ability to  
restore presets · Ability  
to create folders ·  
Ability to create folders  
with custom filenames  
· Ability to create blank  
folders · Ability to  
rename files · Ability to  
move files · Ability to  
delete files · Ability to  
select the output  
directory · Ability to  
select the encoding  
output format · Ability  
to select the video  
format (output size) ·  
Ability to select the  
bitrate · Ability

**What's New in the HBBatchster?**

## Main Features ?

HBBatchster includes support for an extended set of

Handbrake presets

which can be saved as presets to be loaded

later. ? HBBatchster

supports pause/resume functionality when

used with the HandbrakeCLI command line utility. ? HBatchster supports the ability to drag&drop files into the batch window or to the filenames window. ? The GUI window provides a feedback system for batch processing, so users know that the encoding process has started or finished. ? HBatchster allows users to create and use a joblist. ? This application will allow

batch processing to be done on the background, without having to start up a whole process just to encode a set of files. ? HBBatchster includes a system to clean up any garbage in filenames and does so automatically, saving the user the hassle of having to do this manually, as well as providing a graphical user interface to do this very easily. ? The batch window allows user to edit several

different parameters of the encoding process. ? Some parameters are easy to use and change while others require expert knowledge and a little configuration to get this application to work correctly.

Requirements: This application runs on Windows XP and higher. The current version is tested on Windows XP. This application requires the Handbrake CLI to be installed. The application has the

ability to run under the command line of Windows. The user must have access to the command line of their OS. This application is made using Python 2.6 on Windows. Installation: This application runs as an installer, but you can also download the source code file and compile it yourself if you wish to do so. This application can be built to be self-contained, using the Python distutils or be built as a

standard module.

## Installation

Instructions: 1.

Download the

application file. You

can download the file

from: 2. Unzip the

HBBatchster file into a

directory on your

system. 3. Double click

on the HBBatchster

application to start the

application. You can

also compile this

application yourself. 1.

Open the command

prompt. 2. From the

folder you unzipped the

HBBatchster file into,

open a command window. 3. Change the directory to the location of the HBBatchster folder, by typing: `cd "C:\FolderName\HBBatchster"` where "C:\FolderName" is the folder containing the HBBatchster folder. 4. If you've built the application in the HBBatchster folder, type `python setup.py build` to compile the source. Otherwise

## System Requirements:

Minimum: OS:

Windows 7, Windows  
8, Windows 10

Processor: Intel Core i3  
or higher Memory:

4GB RAM Hard disk

space: 4GB RAM Video

card: DirectX 11

DirectX: Version 11

Recommended: OS:

Windows 10 Processor:

Intel Core i7 or higher

Memory: 8GB RAM

Hard disk space: 8GB

RAM We are looking

for talented players

that
