1. The plug-in is for an audio interface, ie. with the track active, you can use this plug-in to switch the L/R channels for mono/stereo, simply by using KEYMACRO. The plug-in will record the left or right channel input with a bit of delay. In the header, you will be able to define a delay time, expressed in semitones. In each part, you can select one channel of the stereo track (LEFT or RIGHT). 2. The plug-in can be used as an insert effect in the mix. In this way, you will be able to edit the two channels of the stereo track, simply by using the slider and the "send" control. 3. The plug-in can be used as a return effect in the chain. In this way, you will be able to insert a channel in the stereo track. 4. A "stereo select" indicator is available. In fact, you can use KEYMACRO to switch between the left and right channel in the stereo track. 5. The plug-in is compatible with the latest interface versions. Requirements: Windows OS compatible with VST 3.0 Plug-ins. All the Windows operating systems. ## What's New In?

Among the plug-ins that you may have available, this one may be the most useful. First of all, it is

easy to use. Then, its cost is modest. Moreover, it is very powerful. In order to use it, you just have to specify the input and output channels for the left and the right channels in the 'Settings' window. If you choose to use the Main Bus output for example, you will hear the left and the right channels on the Main Bus output. If you chose to use the Mono 1 or Mono 2 output, you will hear the left and the right channels only on the respective output. On the other hand, if you chose to use the Mono 3 output, you will hear the left and the right channels on all of them. Of course, you can always change the current output channel by clicking on the icon'switcher' at the bottom of the 'Settings' window. You can also specify the sample rate by clicking on the icon'settings' and then selecting the Sample Rate option. Note that this option allows you to use any standard sample rate of your DAW, including 44.1/48, 44.1/88.2, 48/96, 48/192, 88.2/176.4 and 192/176.4. The only exception is the Stereo 2 output option which always uses a sample rate of 96/192 and hence cannot be changed. If you wish to hear the left and the right channels of the Main Bus output in mono, you have to select the'mono' option. If you want to hear the left and the right channels of the Mono 1 output in mono, you have to select the'mono 1' option. If you want to hear the left and the right channels of the Mono 2 output in mono, you have to select the'mono 2' option. If you want to hear the left and the right channels of the Mono 3 output in mono, you have to select the'mono 3' option. The sound quality can be customized with the 'Settings' window. You can set the Sampling rate, the Number of channels and the Sample Size. Finally, 'Add' and 'Save Settings' allow you to save the settings.

- 1 Stereo input: the left and right channels of your 'Input' are analyzed and sent to both speakers.
- 1 Mono Input (The Main Bus): all of the channels are sent to both speakers as left and right channels.
- 1 Mono Output (1, 2, 3): you can choose which of the outputs you wish to hear the left and the right channels of the respective output.
- 2 Stereo Input: the left and right channels of your
