Adobe's smart cropping tool is physically similar to the tool used in Elements. However, there are some enhancements. The crop tool handles more tightly cropped images even with Image Stabilization by automatically putting more weight on the crop box. In addition, you can shift the crop area back and forth by moving the red arrow tool. Also, the RGBW eyedropper tool automatically adjusts the wings similar to the eyedropper tools in other Adobe software (such as Audition and Photoshop). Adobe's actions can be scripted, and scripts give you the ability to do a lot of things in Photoshop. You can easily do things as simple as getting the options page for a tool, getting the help file, or any of the other features typically available through the F-key functions. You can also set up "ways of doing things," and then automate these with either a script or keystrokes. Images can be placed into a variety of actions, and even catalogs and scripts can be created to work with these actions. Photoshop is the future of the photo editor. It is the future of editing. Of course, you can still do things manually, but when editing a photoshop file needs to do, you need Photoshop. Photoshop Elements and Lightroom will remain great compositional tools, but will fade into obscurity as more and more photographers move toward using Photoshop as their photo editor. Resources are of course a major factor. There is too much to go through everything Adobe Photoshop has to offer. So, we at least have the two Mac Apps for a start. A clipping mask has the ability to erase parts of other objects, while leaving its own shape intact. This way, you can create overlays, masks, and other objects that you can work with when creating overall pieces of graphics. There are three types of layers: ordinary layers, transform layers, and image layers. A layer can consist of one or many objects. You can merge or duplicate layers, and sometimes you will apply a clipping mask to one or more layers. You can also use the Adjustment layer to correct miscellaneous problems caused by the use of the Pen tool and the Eraser. An Adjustment layer shows values such as exposure, contrast, and white balance. 933d7f57e6
