The Pencil tool is a full-fledged replacement for Photoshop's eraser. It's very similar to Photoshop's pen tool, though it lacks the pressure sensor. It's handy for retouching, or for making the perfect brush stroke. By connecting it to Photoshop, you can use it to draw directly in the canvas instead of having to adjust layers. You can also colorize images directly in the canvas. Brushes are a great shortcut to specific types of retouching. You can create a new brush based on many effects, textures, and gradients, and choose from a specific color palette for the base color. You can delete the original brush and cut it up to make a new one, or you can save them in a single collection. You can even use them in Lightroom CC to quickly label certain parts of the image, either as a retouching brush, or a layer mask. You can view all the brush and gradient groups in a single tab, and you can also view the brushes on a canvas and add them to Photoshop layers. This is something that's not possible with the traditional "Brush Panel," which is kept to general brushes. You can also open a snapshot from a suggested edit, or a saved location in Lightroom CC from the new Collections panel that is added. Collections make it simple to open locations and work on them together. This is practically the same tool as the "Brushes Panel" in Photoshop, but you can add them to the canvas instead of having them separate. I foresee the "Classic Art Brush Library," "Classic Portrait Brush Library," and "Classic Landscape Brush Library" that has followed Photoshop from the start, getting replaced with Collections.
