SyncThru for Samsung Sync for Android is a handy solution that is built with a mobile agent to automatically sync data between Android devices and other Samsung devices. It also provides a web-based administration tool. SyncThru for Samsung Sync for Android is a handy solution that is built with a mobile agent to automatically sync data between Android devices and other Samsung devices. It also provides a web-based administration tool. Mobile Agent: Android devices are capable of sending a transaction request to a sync server when a user adds/removes a phone number to an address book, or when a notification is received. Once a transaction request is sent, the server then instructs the mobile agent to synchronize the data from the Android device with other Samsung devices that are on the same network. Remote Client: The SyncThru for Samsung Sync for Android app connects to the SyncThru Mobile Agent over Wifi or 3G network. The app also sends the transaction request when the user adds/removes a phone number to/from an address book or notifies the server that a message has been received on the device. Admin Tool: SyncThru for Samsung Sync for Android provides a web-based administration tool that allows a user to view the existing sync settings for all the Samsung devices on the same network, and to make changes to the sync settings for
