Adobe's graphic editor plays a key role in communicating ideas and concepts visually. This skillset, along with programming skills, is crucial for a graphic designer. In the end, while I still feel that Lightroom beta software has improved significantly over the past year or so and is an impressive application for anyone who wants to edit multiple images, the reality is that it is decidedly more complex than the workhorse application Photoshop. I am visually tired of people claiming that nobody will buy an iPad because it is overpriced. For photographers, Photoshop is an essential, impeccable tool, and it is still my power application of choice, despite its aging. Its value today, especially on the iPad, is a lot more than on the PC or Mac. As someone who has tried nearly all versions of Photoshop in the past few decades and owned most of them, especially the earlier versions, I am very glad to finally have something that feels like a replacement for the software that has dominated my workflow for the past few decades. However, while the results were vastly improved compared to Photoshop CS5 and CS6, Photoshop Elements is still not as potent as the Adobe-owned Adobe Photoshop software. Elements also has much less built-in functionality than the full-featured Photoshop, but new features are added to the program at a much faster rate.
