The new Default Profile experience in PS CC is not just about displaying more information about your edits. In fact, it's about giving you more control to fine-tune your edits. Before, there was a fixed profile that applies simultaneously across image collections and other things. The idea is that you can just leave it alone and let the photos do their thing, or shut down the editing completely and not touch it. In many cases, you can very much do that. Still, when you tweak something, it may be necessary to go in from time to time to ensure that the edits you introduced are actually doing the work you imagined. Here is how the new system works instead. It seems strange that one of the most popular photo editing applications would have such an unorganized interface. Yes, the changes are easy to apply and discover, but something as finite as a tool should be easy to discover and use. Adobe's dilemma is that search is an important feature and has to be done in reference to all that reference data available to them. So, a panel or tool that might be advantageous to a novice user may be too difficult for a more advanced one. Implementing feedback options, such as share buttons, is also a way of improving user experience. Even so, if you are an experienced user, you will have to learn new ways of using the application as well. In fact, if you have used any of the other applications from the Adobe family, you are already familiar with the overall design and user interface. Despite the various changes, the overall design does feel cohesive. Especially when it comes to first time users.

The new Design workspace is a tad smaller than its equivalent on the desktop, but makes a significant alteration on your desktop when it's booted. In earlier versions of Photoshop, you could simply open the Design workspace as a second window—something many still do in the latest release. In this final iteration, however, the so-called Workspace window itself shrinks, becomes a smaller version of the main workspace, and floats above your desktop. This is a big, welcome change as it frees you up to work on a variety of other tasks in the main view. The desktop is getting a new metro look with the design UI. With this new interface, you can customize exactly how everything looks, for every device's screen resolution: Metro-like apps can look like web apps and responsive; web apps, like desktop apps; and the old, standard apps look like they were made for a specific resolution. Pretty cool. A new toolset for video editing deserves mention. One of the new video properties, called Launch Keyframes, allows you to define key frames in a movie clip by marking a specific frame as a key frame. Also new, is the ability to move and delete frames. Both tools ensure that the editor can quickly edit a movie clip without having to mark a key frame. The **Photoshop for Web** suite for designers comes in two parts, called **Web Designer** and **Photoshop for Web** (By clicking, you're redirected to Adobe's product page). Both tools are not substitutes for Photoshop, however, as they can't handle the same features and switching between the programs will automatically close down both apps. Still, Web Designer (**By clicking, you're redirected to Adobe's product page**) provides a way to visualise elements in grids rather than an endless browser full of tabs. It forces you to work within a defined set of rules.

Another unique feature comes in the form of the new Camera Raw Lens. This is a camera calibration tool that is designed to let you fine-tune the appearance of images and adjust colors and contrast. It works directly with Photoshop, and with the latest version of the application, you can now apply it to your entire image before saving it. And, with the latest version, you can open the Lens Settings panel from the Edit menu. Check out some of the new and improved shipping tools, called Smart Objects, in Photoshop Lightroom. This feature is great for photographers, which allows them to edit every object in an image to look like it was created with the similar tools, such as a special lighting effects, lens or camera settings. On the other hand, if you don't yet own Lightroom, it's a great way to learn how to use it. You can learn how to develop frame, edit images, and create a slideshow from Lightroom. It's a one-stop shop for photographers, and if you also own Photoshop, it's a great way to learn the latest in image editing, too. The new features of Photoshop are the biggest innovation in the history of the application. Adobe Sensei helps us effortlessly create, design and share beautiful artworks. I hope this continues the practice as we create, design and share beautiful art. With Share for Review, we finally have a new way to share creative projects without leaving Photoshop.
