With the data collection systems in place, I went and checked my Lightroom data . I did this simply by opening the app on my iPhone, then taking a photo of my newspaper front page. I then went back into Lightroom for the photo. I did not have the process record, so I was not seeing photo "after-the-fact" behavior. I was simply viewing the information that Lightroom had collected on the photo, in accordance with the canvas presets. The data I saw included the scene where the photo was taken, the actual photographers' comments on the photo (some I recognized as folks I had met), and the IPTC data that was present on the original file (I removed this post-review). Here's the thing. I went back into Lightroom for the photo, and then back into Photos.app for the newspaper. The photos were there. So, like it or not, the *photo* was still in the Cloud. Yet, as we went about our project, its data ceased to exist. It vanished and all I could see was the data that factored in when the photo was captured, by the time it was edited, and when it was taken to the Cloud. Let me make this clear. The photo did not vanish. Instead, by default, the photo took its place as one of my iOS apps, and the photo data also moved to the iOS apps. It took this approach when it became aware of any of the cameras I might use, with Creative Cloud available, and it wanted to become that default for whatever the current default was. The big pro is that you have both the full-screen view -- determined by sky or water, and the standard one, shown above. When it comes to the standard view, you can either leave the crop tool active and drag a rectangle around your image to crop it, or you can turn it off and drag a direct selection like an eyedropper. The modes are a bit differently crafted, with the sky and water modes using the eyedropper to only select sky or water, in turn. Share for Review (beta) enables users to collaborate without leaving Photoshop, even when editing images in a browser. It turns a Skype call or Google Hangout directly into a collaborative three-dimensional canvas for editing, so everyone can see and work at the same time. Users can also share a temporary version of an image for review before sharing a final version and preserving important details in editors' original files. Edit in Browser, a preview tool originally introduced as a product in the Adobe mobile app, brings the mobile version's powerful features and performance to Photoshop on the desktop. It lets users resize, view, scroll, and copy and paste an image and even apply filters, gradients, and editing while sharing their work in real time. And the new Delete and Fill tool, which overlays a guide across the top of the image, takes the design process to a new level, redefining the tools users rely on for removing and replacing objects. Adobe Smart Filters, which automatically adjust contrast, color, and exposure, and enable users to create a more professional-looking image even in photos with poor lighting or a simple setting, are also available to enhance photos taken on a phone across desktop. These new features are available as updates to Photoshop, available online at www.adobe.com/creativecloud. As part of the annual release of Photoshop, the desktop version is now the official photo editing solution for Windows and Mac, providing even more powerful tools to designers and artists.

Photoshop also offers four new actions to make transitions seamless when working on desktop and mobile devices. This includes a new Set Perspective browser option, which makes it easier to apply the same, perfect perspective--or crop--to an image on multiple devices. The new Copy Path tool makes it easy to share a selection across devices, and a new Face Detection tool allows you to precisely and quickly crop an image of a person's face. The company also announced the launch of the Photoshop Foundation, an educational program that provides students with a free, comprehensive foundation in Photoshop skills. The Photoshop Foundation will include over 100 downloadable tutorials that describe the entire workflow of a professional digital artist. Resources will include everything from single-layer manipulation techniques to blending multiple-layer effects, as well as basic photo and retouching skills. Students have the opportunity to download and expand this knowledge on their own time, and upload their images to the learning platform upon completion of their 14-day course. At Adobe MAX, Adobe also debuted the Photoface – a new facial image recognition tool in Photoshop CC, enabling users to capture their own face and turn it into a royalty-free texture in minutes, using built-in analysis. This facial detection technology, known as Smart Filters, is available in the Photoshop CC app and in the Photoshop Creative Cloud app for Windows, macOS, and Linux, and is powered by Adobe Sensei. It will also make its way to the Photoshop Elements app sometime during the first quarter of 2019.
