You can do a lot more things in Photoshop, while other things in Lightroom require you to import images into Photoshop. Photocopy machines produce rasterized images - those are the pixels. In the old days rasterized images required far more than a laser printer to create a high quality reproduction. Today you can produce rasterized versions of your photos by using digital cameras. Adobe when using Photoshop has a variety of tools to work with rasterized images - not just as a simple way of creating copies but as a way of improving them. And, because you usually have images that you can't make any changes to, using the Brush or Magic Wand tool is a good option. Remember, Photoshop means manipulation, not only duplication. e3d0a04c9c

Each has a very detailed Help section, so you'll be able to see exactly how things are done. The user interface in both programs is similar, and learning Photoshop is the same as learning Elements. As mentioned, Adobe Elements provides an earlier version of the features available in the pro-level version of Photoshop. For example, Photoshop Elements doesn't support the render rollover feature that is part of Photoshop's complex pattern functions. Colors and the white point can be edited, and you'll be able to apply "component separation" filters, but it's a much simpler experience.
