When you open a Photoshop document, it will be available in both the 2D layer view and the 3D layer view. There are also views that you can go to from the Layers panel in the 3D view to manually create and manipulate the layer. See for more details.

Apply the same layer styles to an object in Photoshop® CC by selecting the layer you want to apply to and then choosing Layer > Layer Style. For example, if you want to apply a gradient to the bottom line of a photo, go to Layer > Layer Style > Gradient > Bottom to apply a gradient extending from black to white. You can also choose from more than 150 pre-made gradient styles. For more about layer styles, go to Help > Contents > Layers.

Duplicate the active layer using Control-J (or go to the Edit menu and then choose Duplicate). If you select the duplicate layer, you can control the contrast and add a border, gradient or other effects to complete the look you want. Transform a photo as a 3D layer using the 3D tools in Photoshop® CC (Transform > 3D > Space). You can take a photo, crop it, apply perspective correction to make it look like it has depth, and then zoom out in the 3D space, enlarge the photo, or flip it horizontally or vertically to fit on your screen.
